

TC_047: Double-tap on "Confirm" button

- **ID:** SCRUM-5
- **Severity:** High
- **Status:** New

Description:

1. Steps to Reproduce:

1. Start the fund transfer process.
2. Enter the transfer amount (e.g., 50,000đ) and valid recipient phone number.
3. Proceed to the final confirmation screen.
4. Tap the "Confirm" button twice in quick succession (double-tap).
5. Observe the system behavior and transaction history.

Test Data:

- Amount: 50,000đ
- Recipient: 0901234567

Expected Result: The system must process only 1 transaction. The "Confirm" button should be disabled or hidden immediately after the first tap to prevent duplicate requests.

Actual Result: (Conceptual - to fill in once tested on live app: Verify if multiple transaction success notifications or balance deductions occur).

Impact: Potential for double-spending or duplicate transactions, leading to data inconsistency and financial errors.
